KOMO MACHINE, INC.

KOMO Turns Heads at IWF 2016! ***IPT makes a big impression.***

LAKEWOOD, NJ – September 19, 2016 – Komo Machine, Inc continued their position as an industry leader at this year's International Woodworking Fair in Atlanta, Georgia. They celebrated their 50th year in the business by unveiling their ***Independent Programmable Technology.***

The KOMO Fusion 1205TT sat center stage in the inviting and signature black & red booth. Customers were able to get a front row seat and enjoy a hands on experience with the KOMO sales team, technical support team and top executives. The Fusion 1205TT was very well received and created the perfect opportunity to showcase IPT.

What is IPT? It is an option rather than a specific model of machine. Available in either a Fusion or Mach III format, single or twin table, with up to 6 heads and work envelopes up to 24' x 8', KOMO's Independent Programmable Technology (IPT) delivers complete flexibility via fully programmable center spacing as well as individual spindle feed, speed and axis control. The spindles can be programmed to operate with complete flexibility. They can be slaved together to cut multiple parts, or they can be split up to cut dissimilar parts on separate tables simultaneously. This gives you the option to run multiple short cycles on one table while running a long cycle on the other. Produce a unique part on each table while using any combination of spindles concurrently. Flexibility at its finest.

Overall, the show's attendance exceeded expectations and was a significant success for KOMO. Vice President of Sales and Service Jeff Erickson stated "We are looking forward to broadening our footprint as a CNC router manufacturer with innovative technology like IPT. We are even more energized by the positive feedback from our customers at IWF this year".

KOMO Machine Inc. designs and manufactures an entire line of high quality precision computer numerically controlled (CNC) routers and machining centers. All of KOMO's products are manufactured in the USA and are designed and supported by a highly skilled team of individuals. KOMO has produced more than 3000 CNC machines for the USA and serves International markets throughout the world with an extensive list of satisfied customers.
