How to Reinstall the Touchscreen Interface – Windows 7

1. Close all programs by clicking the **X** in the top right corner of each program.

2. Open **Windows Explorer** and navigate to **C:\Program Files\Touchscreen Interface**.

3. Copy the following two files to a safe location (a folder on the desktop will do):

      Acquire.dat
      Buttons.dat

4. Click the **Start** menu and search for **Programs and Features**, then click it in the list.

5. Find **Touchscreen Interface** in the list of programs, click **Uninstall** and follow the prompts.

6. Restart the computer. After logging back in to the PC, close any open programs again.

7. Reinstall the Touchscreen Interface:

      a. Navigate to the **KOMO** folder on the desktop
      b. Open the **Drivers** folder
      c. Open the **Touchscreen Interface** folder (possibly named touchscreen interface 3p3 or similar)
      d. Double-click the **Setup** file and follow the prompts to install the software

8. Navigate to the two files that were copied earlier (**Acquire and Buttons.dat**) and move these files back to **C:\Program Files\Touchscreen Interface**. When asked, choose to Copy and Replace both files.

9. Right-click on **touchscreen.exe** and click **Properties**.

10. Click the **Compatibility** tab and check the box next to **Run this program in compatibility mode for:** and in the drop-down menu select **Windows XP (Service Pack 3)**. If for some reason you have trouble launching the program later, return to this step and try selecting Windows XP (Service Pack 2) instead.

11. Check the box next to **Run this program as an administrator**.
